

Archive Accelerator Restore For Veritas Enterprise Vault™

It's true that Veritas Enterprise Vault™ is one of the market's most powerful platforms for e-mail and content archiving. But sometimes you need to restore messages back to a user's mailbox. That's when customers turn to Vault Solutions Archive Accelerator Restore.

The restore feature built into Enterprise Vault typically returns all items from the archives into mailbox – even those with deleted shortcuts. Unfortunately, this often puts unwanted messages back in the user's mailbox.

Archive Accelerator Restore empowers administrators to easily and quickly restore any Exchange message archived by Veritas Enterprise Vault.

With Vault Solutions' Archive Accelerator Restore, items can optionally be restored based only on current shortcuts. The unattended mode schedules multiple mailbox restores at convenient times, such as evenings or on weekends. Included is the ability to restore items for which there are no shortcuts.

The restoration process is managed by administrators directly via the management console interface. This process is multi-threaded and can be set to run during off-hours.

Targets include: Exchange Mailbox, Exchange Personal Archive, Office 365 Mailbox, Office 365 Archive Mailbox, and Google Apps for Business. Archive Accelerator also has the unique ability to migrate journal archived data to Google Apps with Vault or to Office 365 Mailbox Archives.

The solution is capable of processing up to 40 mailboxes per server simultaneously, while multiple servers can be used with automatic load-balancing.

Archive Accelerator can typically process up to 400,000 messages per hour!

Key Features:

Option to Restore all Items or Only Those with Shortcuts

Multiple Mailboxes Restored Simultaneously

Can Migrate Journal Archive Data to Google Apps with Vault or Office 365 Mailbox Archives

Can Restore Direct to Google Apps for Business

Straight-Through Processing (STP) for Direct Migration for Industry Leading Performance Complete Audit Trails
